

WHAT WE DO

What's the biggest problem that, if solved, would unlock the most growth?

Tell us. We'll tell you honestly where AI fits, and where it doesn't.

We start with your problem, not a technology. Then we build whatever actually solves it. Sometimes that's AI. Sometimes it isn't.

- 01 Crores in procurement spend**, hidden across hundreds of unstructured files. Now visible.
- 02 Customer escalations that took weeks** over email. Now closed in days, fully tracked.
- 03 Site data entry that ate hours** every week. Now automated end to end.
- 04 A company-wide policy decision** stuck for weeks on incomplete numbers. Now the analysis is ready before the meeting.
- 05 Research that took a team days** to compile by hand. Now surfaced automatically, and monitored as new information lands.
- 06 Client conversations logged by hand**, follow-ups falling through the cracks. Now a custom-built, voice-first CRM listens, logs, and follows up on its own.
- 07 A multi-team workflow tracked by hand across a dozen Excel files**, no way to see who'd done what or catch an error before it cost money. Now one production system, built for concurrent users across teams, with checks and balances at every step.

Your data is never used to train AI. Independently rated 98% on cybersecurity by Internet.nl, versus a 63% average across Nifty 50 company websites.

WHO WE ARE

Most projects break in translation. Ours don't.

The same two people who understand your business write the code.

No account managers. No bench of juniors. No months of discovery decks. Two founders, hands-on through every engagement, from the first conversation to the system running in production.

Chaitanya Pandit
CO-FOUNDER · MUMBAI

Led client relationships, operations, and technology at a wealth management firm, seeing first-hand where time and value get lost in real workflows. Leads engagements end to end, from spotting where AI creates real impact to execution through to adoption.

[linkedin.com/in/chaitanya-pandit-mumbai](https://www.linkedin.com/in/chaitanya-pandit-mumbai)

Sanika Pandit
CO-FOUNDER

Built and deployed enterprise data and AI systems across sectors globally, taking complex problems from concept to production. Leads product, engineering, and adoption, ensuring every system is robust, secure, and built for measurable outcomes.

[linkedin.com/in/sanikapandit](https://www.linkedin.com/in/sanikapandit)

We work with firms that can't afford to get it wrong.

Listed companies, institutional asset managers, regulated money.

Our fastest build went live in 4 days. Most take less than 4 weeks.

What Working With Us Looks Like

- You see **working software in the first week**, not a slide deck.
- One build shipped **23 features beyond what was originally scoped**, at no extra time or cost.
- **Production-grade from day one**, built to survive real use, not a demo.

Two Ways We Work With You

- AI TRAINING & WORKSHOPS**

We teach your team to fish.

Executive briefings and hands-on workshops, taught by the founders, Pan-India, on-site or virtual. We upskill your team and stay through end-to-end implementation, not just a training day.
- CUSTOM SOFTWARE & AUTOMATION**

We also build the ship.

Ideation to live in weeks, not quarters. Built by founders, runs in your accounts. Not everything needs AI, we build whatever actually solves the problem.

Let's talk.

Tell us what's slowing your business down.
